EVOLUTION IN MOBILITY

Solution for Corporate SIM Management

Netmon is a web-based platform for monitoring and managing real-time national and roaming data traffic usage of SIM cards.

It enables the creation of custom profiles and the application of control policies, including blocking, slowing down, and filtering to restrict access to specific categories of traffic.

- **Allocation of data traffic to SIMs differentiated by country**

- **Customization of control policies**

- **Multi-channel notification system for employees and platform administrators**

- **Built-in firewalls for safe browsing**

- **Real-time management and monitoring**

netmon

Managing Monitoring and Security

You can manage your corporate assets by using three modules:

- Assets Management
- Traffic Management
- Security Management
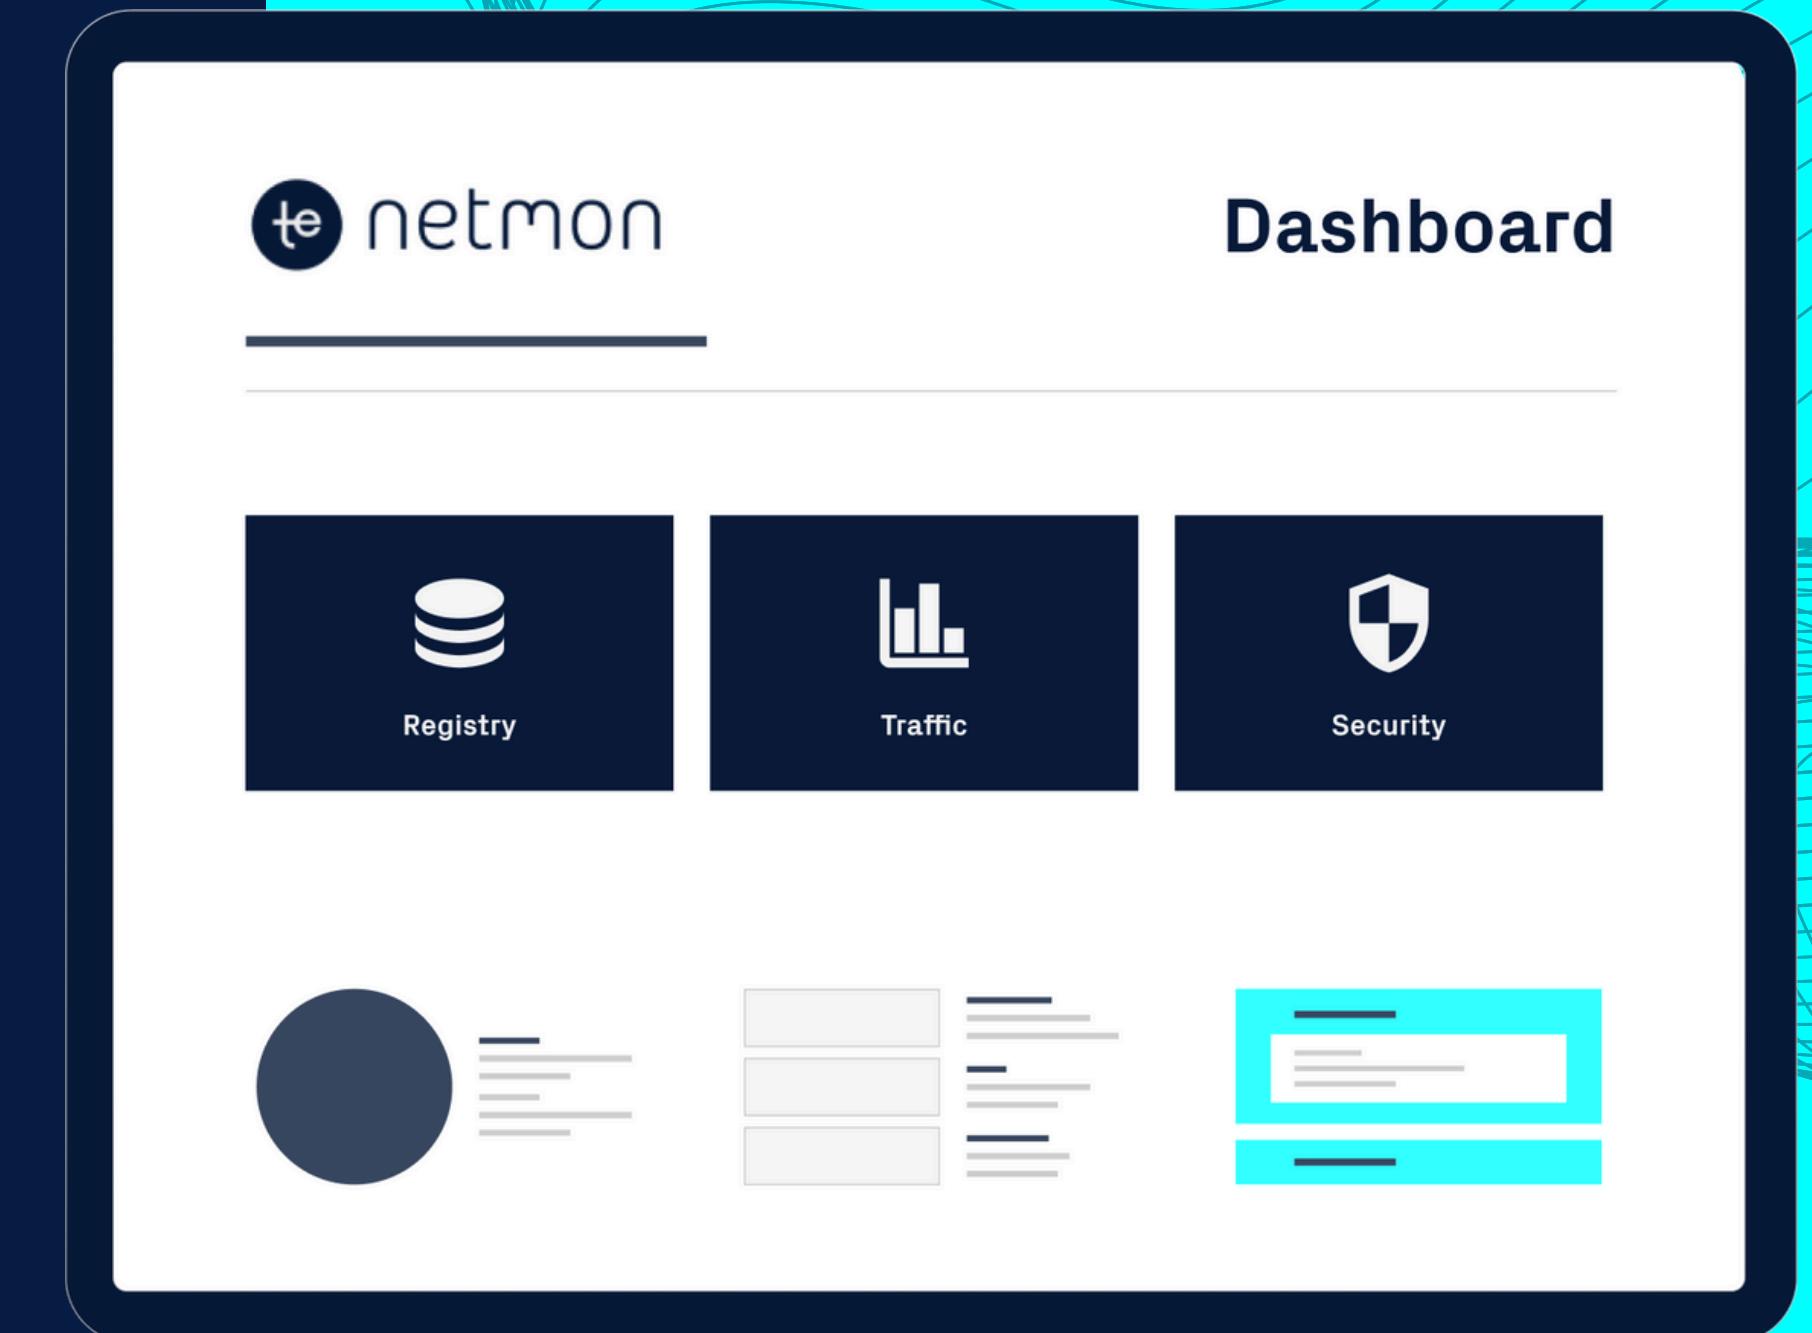

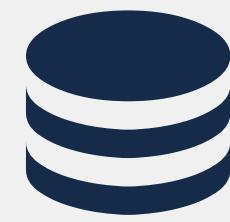

Assets Management

You can manage the entire mobile fleet with the ability to apply business policies. On such a module, you can add, manage and view the details of SIM cards, devices and users.

Main Features

- Corporate SIMs inventory
- Separation by cost centers
- Corporate devices
- Users managing

Traffic Management

Define and assign the amount of data traffic for each SIM or group of SIM cards based on your corporate needs while considering the current commercial offer from your MNO.

You should monitor usage trends in real-time and over time

Main Features

Assign traffic limits for geographical area and for a specified period

Define usage thresholds and policies that should be applied if they are reached

Filter certain categories of traffic and/or URLs

Block/reduce navigation speed when the assigned traffic threshold is reached

Real-time, historic and analytical data traffic monitoring

Set alerts and notifications

Security Management

The platform administrators have easy control over the security measures applied to the corporate SIM cards.

Main features

Interception of all threats on corporate SIM cards that navigate

Automated personalized alerts for each vulnerability detected

Opportunity to block certain types of traffic at the firewall level

Advantages
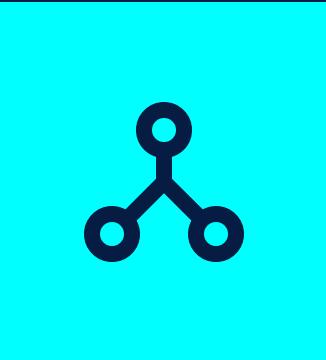

Agentless Solution

Netmon doesn't require any software installation over the devices: it works on a network level through an APN configuration
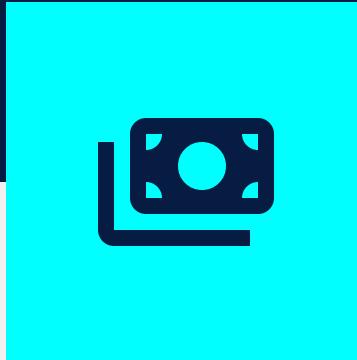

Awareness of consumption

Netmon helps your company optimize spending and have immediate usage control with real-time monitoring
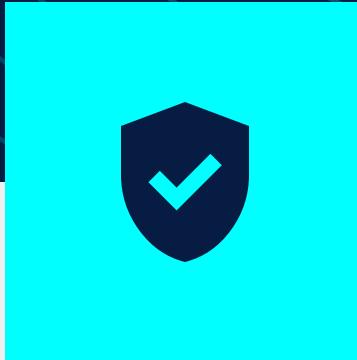

Safe navigation

Protect the data and the privacy of both the company and employees through our Integrated Security and navigation filters

Netmon: Simplifying Operations

Who uses it most and how do they benefit from it in carrying out daily activities?

IT Manager

- **Centralized control** of corporate assets: connection between SIMs, devices and employees
- Integrated **security** and customizable navigation filters
- **Agentless solution**: it operates on the network via **APN**, no installation required
- Netmon can be integrated with corporate systems via **API**

HR Manager

- **Reduced operational workload** thanks to simplified management of company resources
- **Policy management** based on employee roles: creation of VIP, intermediate, and basic profiles
- **GDPR-compliant web platform,** aligned with internal policies on device and internet usage, while respecting **employee privacy**

Purchasing Department

- **Cost optimization**: differentiated data traffic allocation, visibility into current and historical usage through analytical and historical monitoring
- **Traffic profiles adapt** to the current commercial offer with the MNO
- **Transparency** in the usage of the mobile telecom offer
- **Budget forecasting** and management by cost centers

Top Reasons to Choose Netmon
