Solution for Corporate SIM Management

Netmon is a web-based platform for monitoring and managing real-time national and roaming data traffic usage of SIM cards.

It allows companies to define data traffic profiles, apply control policies, monitor data usage, and ensure employees' online security.

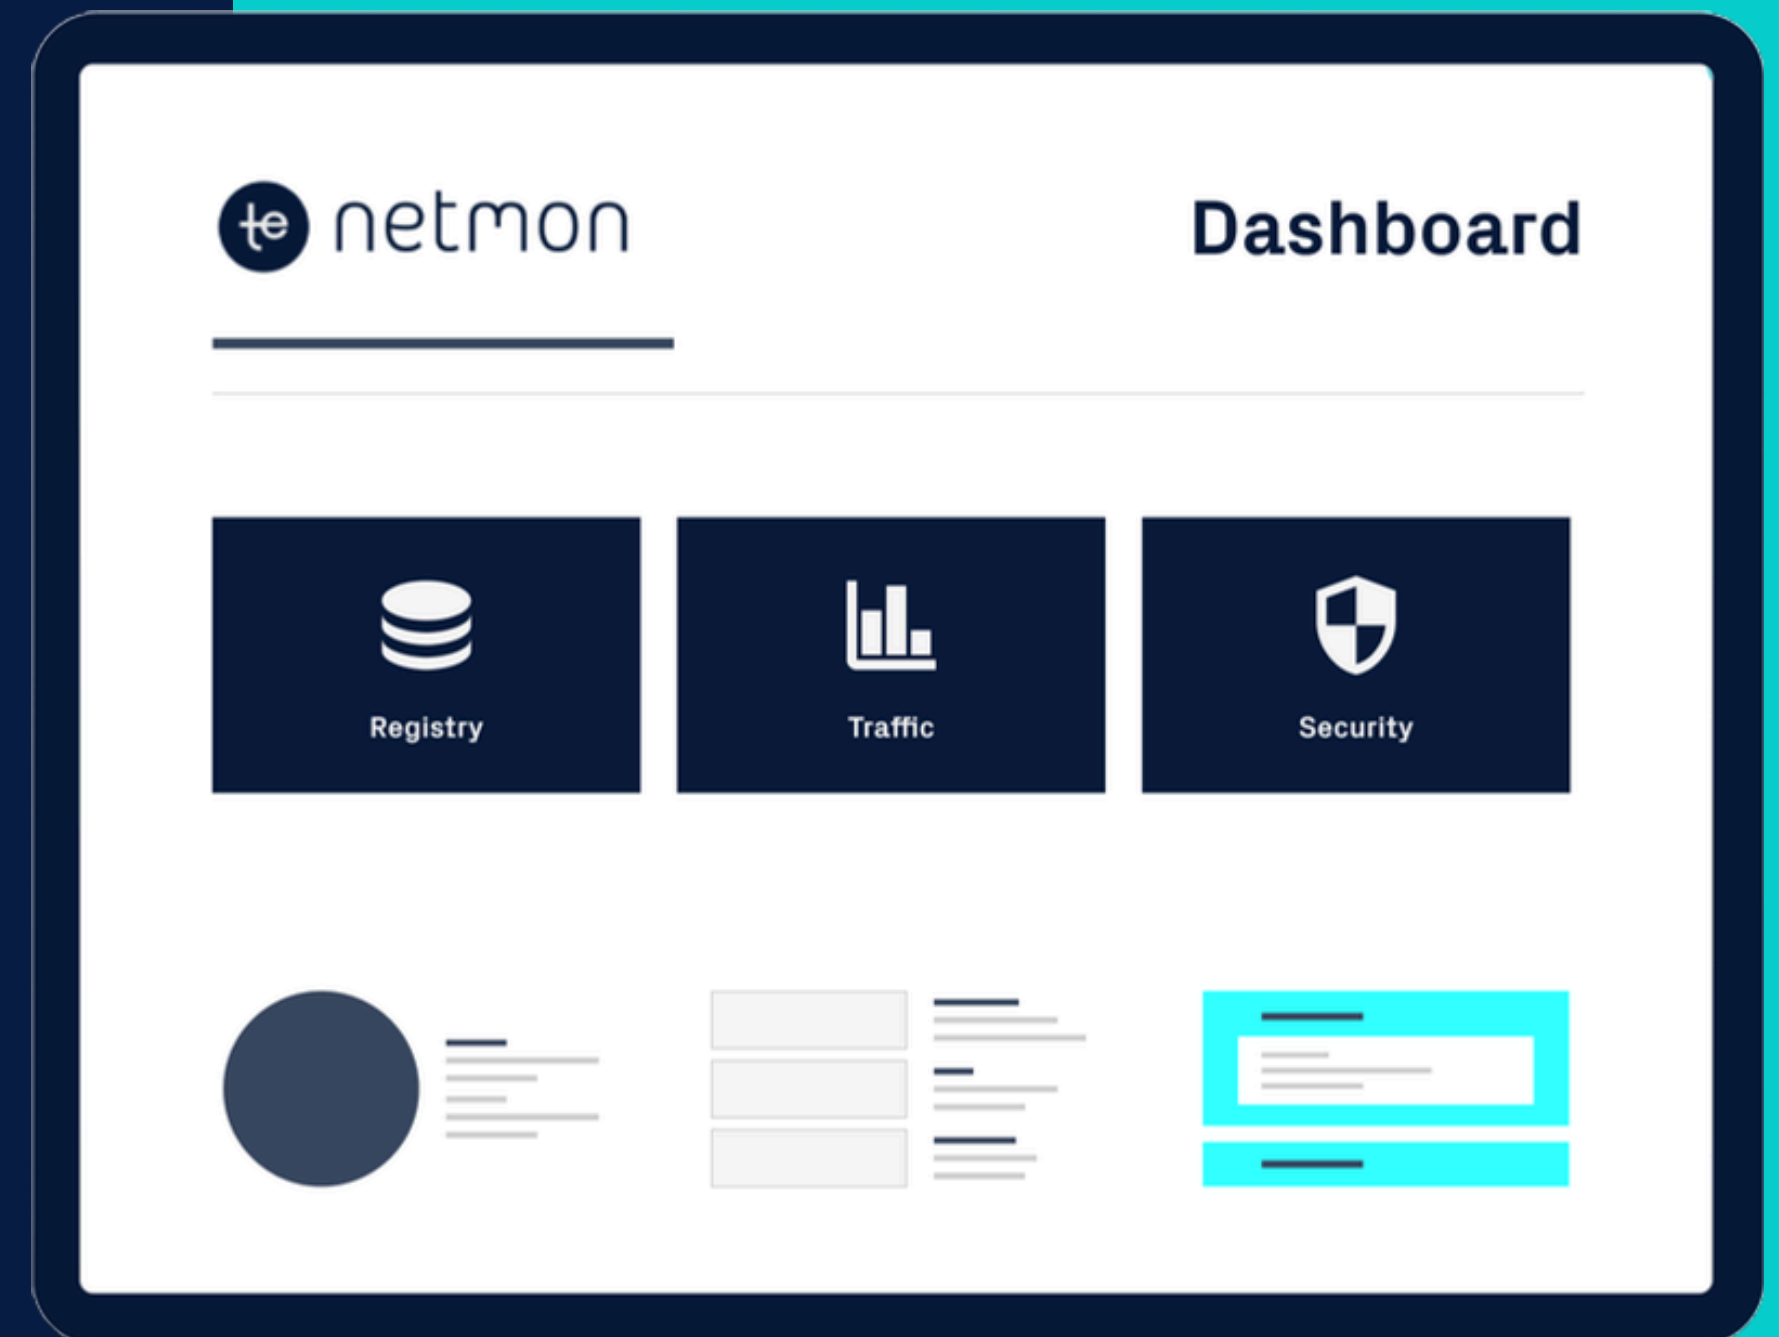

- **Allocation of data traffic to SIMs differentiated by country**
- **Customization of control policies such as traffic blocking, slowing down, and web navigation filtering**
- **Multi-channel notification system for employees and platform administrators**
- **Built-in firewalls for safe browsing**
- **Real-time management and monitoring**

Managing Monitoring and Security

You can manage your corporate assets
by using three modules:

- Asset Management
- Traffic Management
- Security Management

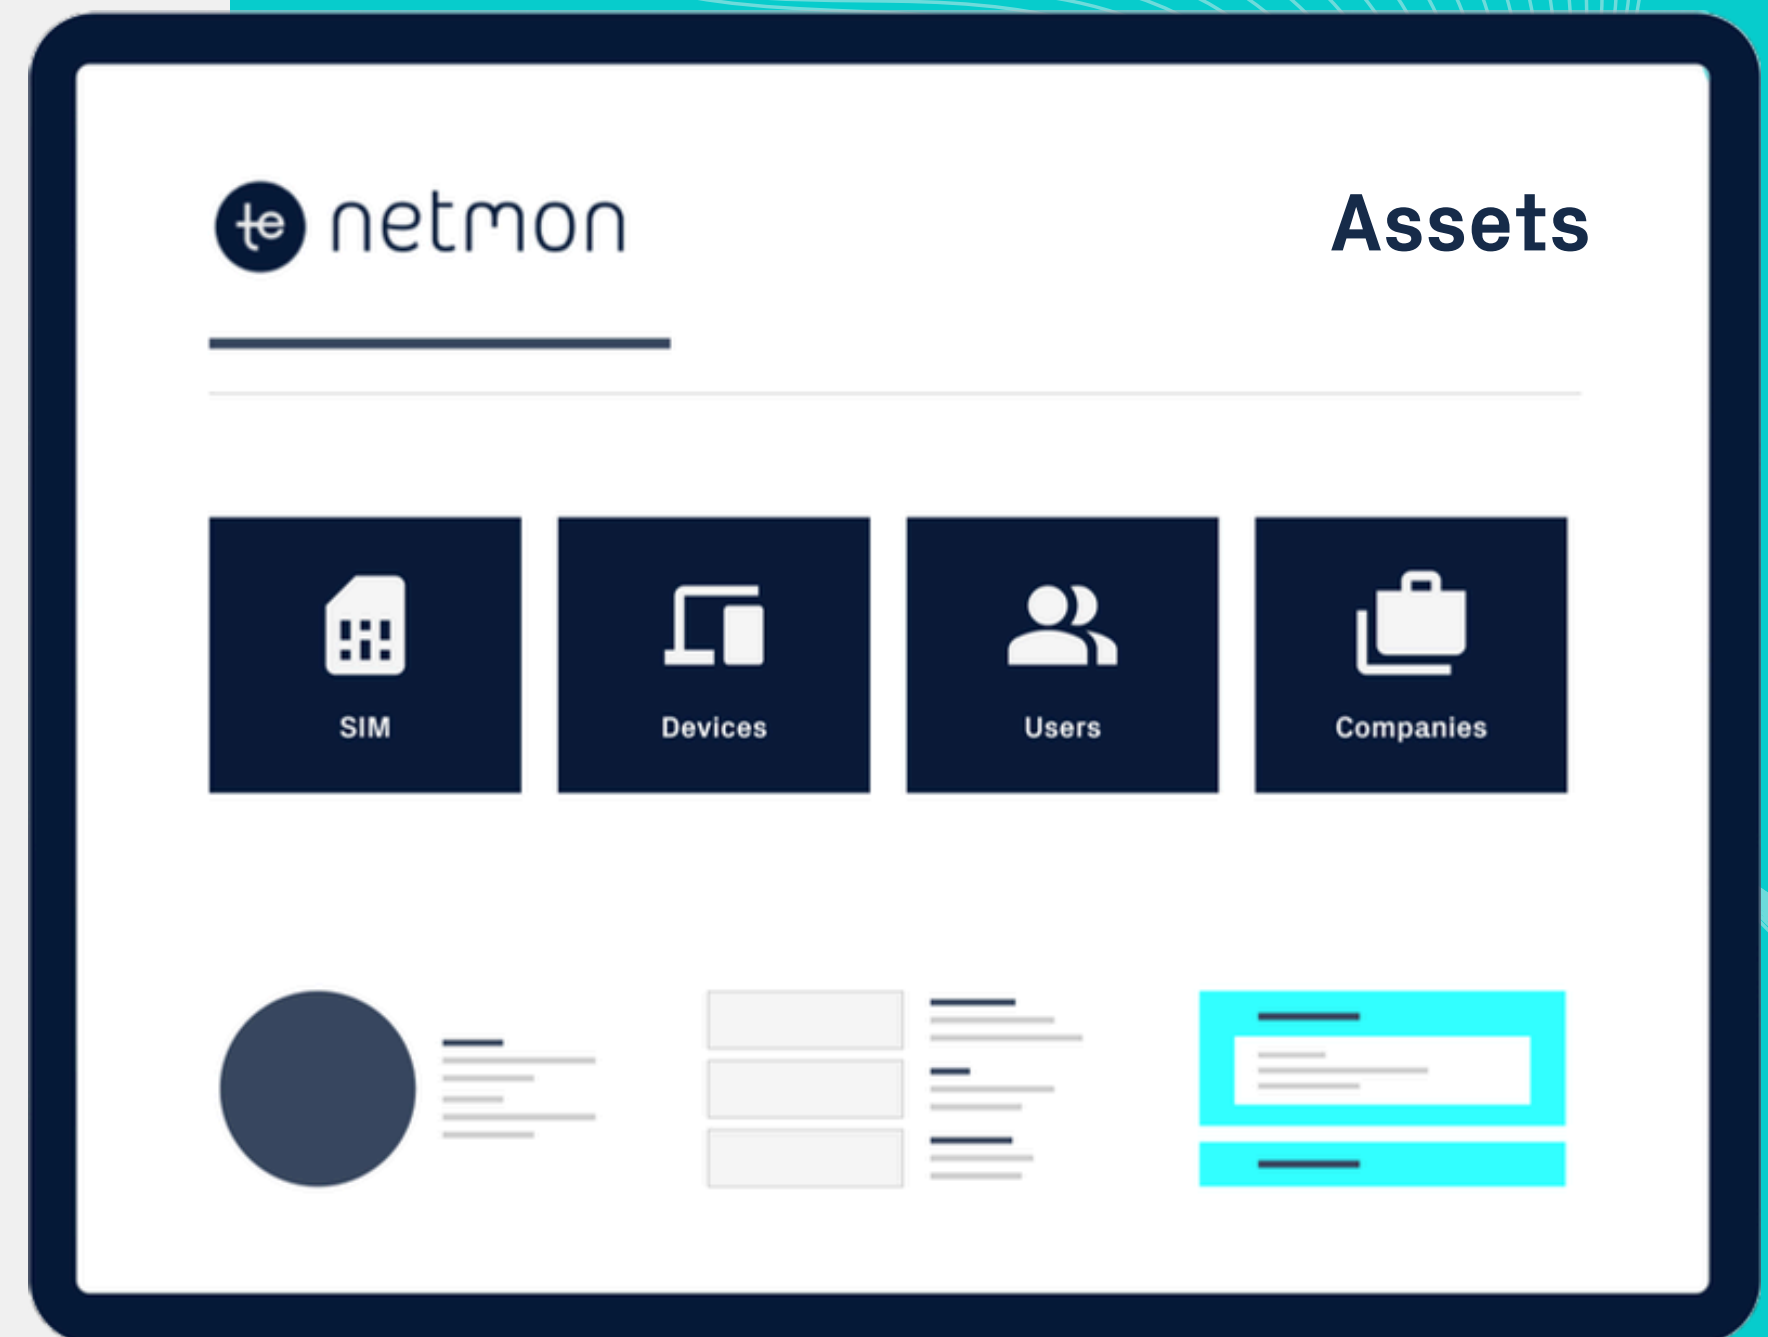

Asset Management

You can manage the entire mobile fleet with the ability to apply business policies. On such a module, you can add, manage and view the details of SIM cards, devices and users.

Main Features

-  Corporate SIMs inventory
-  Separation by cost centers
-  Corporate devices
-  Users managing

Traffic Management

Define and assign the amount of data traffic for each SIM or group of SIM cards based on your corporate needs while considering the current commercial offer from your MNO.

You should monitor usage trends in real-time and over time

Main Features

Assign traffic limits for geographical area and for a specified period

Define usage thresholds and policies that should be applied if they are reached

Filter certain categories of traffic and/or URLs

Block/reduce navigation speed when the assigned traffic threshold is reached

Real-time, historic and analytical data traffic monitoring

Set alerts and notifications

Security Management

The platform administrators have easy control over the security measures applied to the corporate SIM cards.

Main Features

-  Interception of all threats on corporate SIM cards that navigate
-  Automated personalized alerts for each vulnerability detected
-  Opportunity to block certain types of traffic at the firewall level

Advantages

Agentless Solution

Netmon doesn't require any software installation over the devices: it works on a network level through an APN configuration

Awareness of Consumption

Netmon helps your company optimize spending and have immediate usage control with real-time monitoring

Safe Navigation

Protect the data and the privacy of both the company and employees through our Integrated Security and navigation filters

Netmon: Simplifying Operations

Who uses it most and how do they benefit from it in carrying out daily activities?

IT Manager

- **Centralized control** of corporate assets: connection between SIMs, devices and employees
- Integrated **security** and customizable navigation filters
- **Agentless solution**: it operates on the network via **APN**, no installation required
- Netmon can be integrated with corporate systems via **API**

HR Manager

- **Reduced operational workload** thanks to simplified management of company resources
- **Policy management** based on employee roles: creation of VIP, intermediate, and basic profiles
- **GDPR-compliant web platform**, aligned with internal policies on device and internet usage, while respecting **employee privacy**

Purchasing Department

- **Cost optimization**: differentiated data traffic allocation, visibility into current and historical usage through analytical and historical monitoring
- **Traffic profiles adapt** to the current commercial offer with the MNO
- **Transparency** in the usage of the mobile telecom offer
- **Budget forecasting** and management by cost centers

Top Reasons to Choose Netmon

Management Autonomy

- **Complete management** of corporate assets
- Features **customization**
- **Agentless solution:** requires the configuration of the APN on corporate mobile devices

Cost Control

- **Data traffic usage monitoring** to optimize the mobile phone plan offer
- **Your company prevents and avoids bill shock**, usefull for SIM that navigate in roaming
- **Consumption awareness** through time thanks to analytical monitoring
- **Personalization of traffic profiles** by specifying data amounts and usage policies for each SIM card o group of SIM cards

Online Security

- **Safe browsing:** the traffic generated by the SIM cards is routed through the Netmon infrastructure before accessing the network
- **Protection** of corporate data and employees' privacy
- **The ability to apply** to mobile devices **the same security and protection policies** already in place on your company's fixed network

Assistance

- Our **Support Team** handles the **platform configuration** according to your company's requirements and the commercial profile subscribed with the mobile network operator
- The service includes a **training session** delivered by our specialized personnel to support the use of the platform
- Our **Help Desk** is available throughout the entire duration of the service via **telephone, Live Chat, and email.**

Commercial Model

Licenses

We provide various licenses depending on the required features. **License activation is SIM-based and comes with a monthly fee.** Costs depend on the number of SIMs you want to manage.

Activation

The **one-time service activation** fee includes:

- Web platform creation and configuration
- Enrolment of corporate SIM cards on the web platform
- Training session on platform usage.
- Help Desk service

Customization

Upon request, the can include:

- Activation of a dedicated APN
- Implementations requiring ad hoc development activities
- Dedicated technical support or personalized assistance
- Netmon integration via API

Why choose Technacy?

- We collaborate with Mobile Network Operators to offer value-added solutions for companies, with high customization
- We are already partner in Italy with the main MNOs: **TIM** and **Fastweb+Vodafone**

FASTWEB +  **vodafone**

 **TIM ENTERPRISE**
